**Anderson**

**POWER BRUSHES**

**Terminology**

- **Outside Diameter** – The overall diameter of the brush. To provide the most efficient use and lowest end-of service cost, always use the largest diameter brush practical. Radial brushes used on portable tools should not be larger than six inches in diameter.
- **Trim Length** – The length of the fill material extended beyond the brush back or flange. A short trim length provides a stiff, fast cutting brush. A long trim length provides stiff, fast cutting brush. A long trim length provides flexibility - for brushing irregular surfaces - and a softer brushing action.
- **Arbor Hole** – The actual diameter of the mounting hole in the brush. Various arbor holes and adapters are available to accommodate the shaft sizes used on different type of motor drives.
- **Operating Face Width** – The width of the brush face when the brush is under power. Wide face brushes cover a larger working area and are usually stiffer acting than narrow face brushes which are more flexible. Narrow face brushes are used individually to brush confined areas. They are also used in multiples to provide greater width and to eliminate streaking.
- **Brush Length** – The length of the fill material in end and tube type brushes.

**Types of Power Brushes**

- **Radial Brushes** – Filled with the finest high tensile, oil tempered steel, stainless steel, brass and other non-ferrous wires. A variety of synthetics and natural fibers are used. Two basic styles of wire are used in manufacturing radial wire brushes... crimped and straight.
- **Cup Brushes** – Designed for use on high speed air and electric tools, drill presses and pipe line machinery. Two styles of cup brushes... manufactured in the knot construction for heavy duty brushing and crimped wire for lighter brushing.
- **End Brushes** – Used on tools operating at high speeds to provide effective brushing in confined areas. Available in a wide range of sizes and shapes as well as wire diameters.
- **Tube Brushes** – Used on portable tools and drill presses for cleaning internal surfaces. Tube brushes are ruggedly constructed to provide the maximum cleaning action. These brushes are available in a complete range of sizes and diameters.
- **Strip Brushes** – Used for many cleaning jobs. Applications are constantly being found in met working, rubber, food, textile, paper and chemical plants. Strip brushes are used to provide a wiping or sweeping action, or are mounted on a hub to make an open face rotary brush.
- **Special Brushes** – Can be made to customer specifications by supplying a complete brush description including type, diameter, wire size, face width, trim length and arbor hole size.

**Power Brush Applications:**

- **Cleaning** – Used carbon wire filled brushes for dry cleaning operations such as removal of rust or scale, insulation from wires, varnish from stators, etc. Use fiber (tampico) or Anderson (synthetic filled) brushes or stainless steel filled wire brushes for wet cleaning applications.
- **Surface Finishing** – Used as final finishing tools to improve flat or cylindrical surfaces that have been ground or abrasive polished. The brush removes the small raised metal particles without changing dimensions.
- **Deburring** – Power brushes are ideal tools for completely removing burrs. Brushes can be used on all types of materials and are suitable for deburring irregular shaped parts.
- **Roughening** – Power brushes are used for rouging rubber, leather, plastics, ferrous and non-ferrous metal before bonding or painting. Brushes are also used to produce satin or matte finishes on various materials.
- **Edge Bending** – Anderson power brushes offer a complete range of tools for blending surface intersections. Brushes perform this application without removing metal on the surface adjacent to the edge or change the part tolerance.

**Engineering Guide**

**Equipment:**

Use of the proper equipment with power brushes is an important consideration in setting up a successful brushing application. Even when the correct brush has been selected, it will not perform optimally if the equipment is not capable of supplying the right operating conditions.

When selecting equipment for brushing applications, remember, the largest diameter brush permitted by machine clearance and part size will provide the most efficient tool and lowest end-of-service cost. (Maximum recommended brush diameter for portable tools is 6".) When brushing large surfaces, the widest possible brush face width will also provide maximum efficiency.

**Horsepower:**

Three factors affect the horsepower required to drive a power brush for any given operation:

- 1) Brushing pressure required to accomplish the work
- 2) Resistance developed between work and brush
- 3) Speed of the brush

The chart provides a working guide for horsepower requirements based on medium brushing action. For conditions not simple or normal, consult one of our service representatives.

Brush Dia. (in)	Recommended Motor Size (hp)	R.P.M.
4	1/4	3450
6	1/2	3450
8	3/4	3450
10	1	1750
12	1	1750
15	1 1/2	1750

Horsepower ratings are for 1" brush face.

**Brushing Speeds**

For efficient use and low end-of-service cost, there is an optimum operating speed for each type of power brush. The table provides a guide to practical brushing speeds.

Recommended Surface Speeds for Brushing Applications	
Application	Surface Ft. per min.
Removing Burrs	5500 to 7500
Removing Scales	7500 to 10,000
Cleaning Welds	7200 to 9400
Edge Blending	4700 to 7500
Cleaning (dry)	4000 to 5500
Cleaning (wet)	1900 to 4000
Surface Polishing	6400 to 8000
Surface Buffing	800 to 10,000

**Brushing Pressure Control**

For efficient use and low end-of-service cost, there is an optimum operating pressure. Controlling the pressure applied to the brush is important. Brushing pressure affects the quality of the work and the brush life. Brushes should always be operated at the highest practical speeds with the lightest possible pressure. The sharp tips of the brush filament do the work. Excessive pressure bends the filament and results in a wiping action rather than a cutting action. It also causes premature breakage and shortens the life of the brushing tool. Where practical, the best method of maintaining the uniform brush pressure is through the use of a meter amp which measures the load on the drive motor.

# Anderson

## Metric Conversion Charts:

BRUSH DIAMETER		FACE WIDTH		WIRE GAGE	
Millimeter	Inches	Millimeter	Inches	Millimeter	Inches
25	1	4	5/32	0.08	.003
51	2	6	1/4	0.10	.004

		20	25/32		
		22	7/8		
		24	15/16		

## Brush Face Conditioning:

When using wire wheel brushes, periodically reverse the direction of the rotation to take advantage of the self-sharpening action that will result. This may be accomplished by removing the brush from the spindle and turning it side for side, and remounting securely. See illustration.

## Wire Gages:

Wire sizes shown are in decimals of an inch. The following are equivalent American Steel Wire (formerly Washburn and Moen) gage numbers.

Diameter (in)	ASW Gage No.	Diameter (in)	ASW Gage No.
.003	-	.0118	33
.004	-	.014	30
.005	47	.016	28
.006	43	.020	25
.008	38	.023	24
.009	36	.028	23
.0095	35	.030	-
.0104	34	.035	20

## Table of Arbor Hole Numbers:

If an Arbor holes other than those shown is required, i.e., if your item number ends in "0", specify the size needed

Arbor Hole Diameter	Arbor Hole Number
1/4	1
3/8	2
1/2 - 3/8	3
5/8 - 1/2	4
5/8 - 11	5
3/4	6
1	7
1 1/4	8
2	9
Other	0

## Table of Surface Speeds:

Recommended speeds in this catalog are given in the R.P.M. The following table gives the approximate surface feet per minute (SFPM) of the brush face for standard diameters at various R.P.M.

RPM	Diameters					
	4	6	8	10	12	15
MM	100	150	200	250	300	375
1,000	1,050	1,575	2,100	2,625	3,150	3,925
1,500	1,575	2,350	3,150	3,925	4,725	5,900
1,750	1,800	2,750	3,650	4,550	5,500	6,800
2,000	2,100	3,150	4,200	5,250	6,275	7,850
2,500	2,625	3,925	5,250	6,550	7,850	9,825
3,000	3,125	4,725	6,275	7,850	9,425	11,775
3,450	3,600	5,400	7,200	9,000	11,000	13,500
3,750	3,900	5,900	7,800	9,800	11,800	-
4,000	4,175	6,275	8,375	10,475	-	-

6,000	6,275	9,425	-	-	-	-
8,000	8,375	-	-	-	-	-

## ANDERSON Brush Correction Guide

There are many variables from plant to plant in brushing conditions. It is impossible to recommend a single type brush for a given application. If the first brush selected does not do the job, select a second brush with the following ideas in mind.

Note: The speed at which the brush rotates is an extremely important factor. (See the Table of Surface Speeds.)

Desired Changes	Suggested Change for Brush
Faster Action	Use larger diameter brush. Run brush faster. Use brush with heavier wire. Use brush with shorter trim.
Finer Finish	Use brush with finer wire. Try treated or untreated Tampico brushes with finishing compound.
Reach areas of an irregular surface	Use brush with longer trim, giving more flexibility.
Remove burr instead of rolling or peening it	Use brush with shorter trim or try treated Tampico with an abrasive burring compound.

## CRIMPED WIRE WHEEL BRUSHES

### Crimped Wire Wheel Brushes (DA, DH, DS, DMX, DE Series)

The DA, DH and DS lines are general purpose wire brush wheels and are characterized by a wide and dense brushing face. This brush construction permits mounting brushes individually, or in multiples. DMX series offers features of DA series, medium face but with a fixed arbor and is especially suitable for multiple brush assembly. DE series is designed for light duty applications where flexibility is required.

#### Typical Applications:

- Flash removal, plastic parts
- Finishing for appearance on aluminum ware, copper and brass utensils, soft steel and stainless steel
- Rust removal from pipes and flat surfaces
- Burr removal on gears, steel or cast iron
- Blending of surface junctions after machining
- Roughing leather for adhesive purposes
- Removal of excess plastic on laminated glass
- Steel drum cleaning
- Weld cleaning
- Deburring inside and outside of pipes
- Wire stripping
- Coating of cement pipe
- Roughing tires prior to re-treading
- Degraining wood paneling
- Steel, brass and copper sheet and strip descaling
- Contouring sponge rubber
- Burr removal of brass and stainless steel tube sheets
- Finishing brass and copper sheet metal
- Paint removal
- Skiving paper

### Premier Duty High-Density: MEDIUM FACE (DA Type)

**Brush Characteristics:** The premier of medium face wire wheels Anderson's best medium face crimped wire wheel. Absolute lowest end-of-service cost. Maximum desirable wire points at brush face. Highest quality oil tempered crimped wire. Low flexibility - fast cutting - long life. Uniform brushing action.

#### Popular Applications:

- Deburring/Edge blending.
- Flash removal - rubber and plastic parts.
- Finishing for Appearance.
- Cleaning and rust removal.
- Roughing for adhesion.

\*DA3 has 1/2" arbor hole. For 302 Stainless Steel, add S to Catalog Number.

**Tool Accessories**

**Anderson**

**Heavy Duty:  
WIDE FACE (DH Type)**

**Brush Characteristics:**

- Wide brushing face
- Low flexibility - fast cutting action - long life
- Highest quality oil tempered crimped wire heavily filled
- Uniform brushing action

**Popular Applications:**

- Deburring
- Flash removal - rubber & plastic parts
- Edge blending
- Cleaning & rust removal

For 302 Stainless Steel, add S to Catalog Number.  
DA, DH, DS wheels fit directly on 2" diameter arbors without adapters.  
Adapters are required for mounting on smaller arbors. One pair is required for each wheel.

**Tuft-Tech Multi-Duty High Density:  
MEDIUM FACE (DMX Type)**

**Brush Characteristics:**

- High performance, general purpose wheel
- Priced below brushes of similar design
- Out performs brushes of similar design
- Heavily filled with highest quality oil tempered crimped wire
- Medium brushing face
- Arbor design permits stacking for wide face brushing

DE10	01739	01779	10	.006	3/8	11/32	3-1/2	2	3,250

For 302 Stainless Steel, add S to Catalog Number.  
DE brush sections come with 2" inside diameters (4" has 1-1/4" inside diameter).  
They are designed for light duty applications where flexibility is important.  
They are adaptable to smaller arbor holes.

**Crimped Wire Wheel Brushes (DM Series)**

The DM line is particularly suited for jobs where the brushing area is narrow, or the surface or edge is flat. Brushes offer good flexibility, can be mounted in multiples to produce a wide face assembled brush.

**Typical Applications:**

- Table cleaning in glass industry
- Removing excess flux on welding rod
- Rust removal
- Burr removal on uneven surfaces
- Light scale removal
- Finishing aluminum & other soft materials
- Paint & rust removal
- Conveyor cleaning
- Thread cleaning & deburring
- Mold cleaning
- Conveyor rail cleaning
- Tire rim cleaning
- Deburr & blend aircraft brakes discs
- Roughing leather & rubber for bonding
- Removing rubber flash & parting lines
- Deburring powdered metal parts

**Multi-Duty:  
NARROW FACE (DM Type)**

**Brush Characteristics:**

- Narrow brushing face
- High flexibility - long trim
- Highest quality oil tempered crimped wire
- Fine to medium course brushing action
- Gang mount for wide brush face

**Popular Applications:**

- Deburring
- Edge blending
- Cleaning & rust removal
- Roughing for adhesion
- Finishing for appearance

\* Also available in Brass Wire - DM6B 03224, .005.  
For 302 Stainless Steel, add S to Catalog Number.

## Anderson

### Andermax Crimped Wire Wheel Brushes

Andermax brushes are provided in crimped wire, abrasive filament material and twisted tuft (knot-type) construction. These larger than average circumference wheels are ruggedly constructed to satisfy the most demanding brushing requirements. Andermax wheels are designed for use on automatic or semi-automatic brushing machines. These heavily filled, short trim wheels combine fast, uniform cutting action and long service.

**Typical Applications:**

- Gear and sprocket deburring
- High production cleaning and deburring

### ANDERMAX™ CRIMPED (DMXX) Type

**Brush Characteristics:**

- Larger than average circumference
- Maximum density and wire points
- Short trim length
- Long life
- Used on specialized brushing machines

**Popular Applications:**

- High production blending and deburring
- Flash removal

Cat. No.	Item No.	Dia. (in)	Wire Size (in)	Approx. Width at Faceplate (in)	Trim Length (in)	Arbor Hole* (in)	Max. Safe Free Speed RPM
DMXX12-9	03789	12	.006	13/16	3/4	2	3,000

\* 1-1/4" Arbor Holes have two 1/4 x 1/8 keyways.  
2" Arbor Holes have two 1/2 x 1/4 keyways.

### Anderbond Crimped Wire Wheel Brushes

Anderbond encapsulated wire brush provides longer brush life, safe operation, stronger brushing action and less wire breakage. Brushes are produced by encapsulating the wire brush material with an elastomer.

**Typical Applications:**

- Removing rubber from end of high pressure hose
- Removing varnish from bearing surface of electrical components
- Removing insulation coating from electrical wires
- Removing burrs from mechanical parts and ends of tubing
- Preparation of tire for recapping
- Removing rubber flash and mold runout rubber-to-metal parts
- Roughing of rubber, leather and other surfaces, to prepare them for adhesive bonding

### ANDERBOND BRUSHES

**Brush Characteristics:**

- Metal wire encapsulated in elastomer
- Strong brushing action
- No inefficient flare out
- Fast cutting with minimum pressure

**Popular Applications:**

- Short trim applications
- Relatively flat surfaces
- Avoid application to surfaces over 180° F
- Choose a wire size one gauge narrower than with standard wheel

*Anderbond Brushes Continue*

### Anderbond Brushes: MEDIUM FACE & WIDE FACE (DA-U and DH-U Type)

DA6U

Cat. No.	Item No.	Dia. (in)	Wire Size (in)	Approx. Face Width (in)	Approx. Width at Faceplate (in)	Trim Length (in)	Max. Safe Free Speed RPM
DA4U	01644	4-1/4	.014	25/32	15/16	5/8	6,000

**Micro Brushes (Small Diameter)**

Micro Brushes are small brushing tools that are available in a wide range of sizes and fill materials. These brushes can be used singly or in multiples, and mounted directly on the shaft of a portable tool. In most cases, these brushes are applied on brushing applications similar to DM (Multi-Duty Narrow Face Section) brush, where clearance problems require a small diameter brush.

**Typical Applications:**

- Removing insulation from electrical wire
- Cleaning internal surfaces
- Removing burrs from ring grooves and internal threads
- Light deburring of gears

**SINGLE SECTIONS**

**Brush Characteristics:**

- Small diameter brushing tools
- Narrow brushing faces
- Can be mounted in multiples
- Designed to operate at high speed
- Light duty applications

**Popular Applications:**

- Deburring
- Edge blending
- Cleaning - Rust removal
- Roughing for adhesion
- Finishing for appearance

**Single Sections:

**CUP BRUSHES**

**Cup Brushes:**

Wire cup brushes are rugged tools for fast, heavy-duty cleaning of large metal surfaces. They are designed for use on high-speed air and electric portable tools.

These brushes are especially suited for removing rust, weld scale, corrosion, old paint and preparing surfaces for finishing. They are widely used on structural steel, tank cars, ship bottoms and bridge work.

**Popular Applications for Cup Brushes:**

- Tank & Drum cleaning
- Weld scale removal
- Corrosion & rust removal
- Paint removal
- Cleaning castings for machinery
- Polishing dies
- Preparation of surfaces for painting or welding

*Cup Brushes Continue*

## Anderson

### Crimped Wire Cup Brushes

Designed for the same applications as knot type cup brushes, but for softer brushing action and less severe applications. Construction of the highest quality tempered steel these brushes provide aggressive cutting action and long life.

#### Crimped Wire:

#### LIGHT DUTY (UC & UCX Type)

##### Brush Characteristics:

- Rugged, fast cutting action
- Long life
- Highest quality oil tempered stainless steel wire
- Safety designed cups
- Smooth performance at high speeds

##### Popular Applications:

- Heavy duty cleaning of large surfaces
- Weld scale removal
- Deburring
- Edge blending
- Roughing

### Anderlon Cup Brushes

Heavily filled with nylon filament combined with silicon carbide or aluminum oxide abrasives. They are ideal tools for deburring, surface blending, dulling surfaces, final sanding prior to primer coat, and for metal preparation.

#### Anderlon Abrasive Filament:

#### LIGHT DUTY (UC-A Type)

##### Brush Characteristics:

- Highly abrasion resistant
- Virtually unaffected by solvents, acids and alkalines
- Can be used wet or dry
- Uniform cutting action

##### Popular Applications:

- Deburring
- Surface blending
- Dulling surfaces
- Metal preparation
- Final sanding prior to primer coat

### Knot Type Cup Brushes

Available in single or double row construction. The single row brush is excellent for general heavy-duty work, able to reach into corners and angles. The double row cup brush is recommended for more rigorous applications. It combines fast cutting action with longer life and covers a greater surface area.

#### Knot Type:

#### SINGLE ROW (US Type)

##### Brush Characteristics:

- Able to reach into corners & angles
- Fast cutting
- Flexible
- Good surface coverage

For 302 Stainless Steel, add S to Catalog Number.  
JUS, US80 and Brushes have a 5/8-11 external nut.

### Cable Twist Cup Brushes

Tufts twisted their entire length are recommended for extremely severe cleaning. Anderson brushes contain the highest quality oil tempered carbon and tempered stainless steel wire to insure long life and fast cutting action.

Available in single or double row construction.

#### Knot Type Cable Twist:

#### SINGLE ROW (USC & JUSC Type)

##### Brush Characteristics:

- Extremely rugged cutting action
- Long life
- Fast cutting action
- Highest quality oil tempered carbon steel

**Banded Cup Brushes**

Offers increased aggressiveness by reducing flare of brush face. This brush is recommended for extremely rigorous jobs. The steel bridle that reduces flaring can easily be removed after the brush is worn down. It is then ready for many additional hours of service.

**Knot Type, Banded:**  
**DOUBLE ROW (UDXCB Type)**

**Brush Characteristics:**

- Increased aggressiveness by reducing flare of brush face
- Band can be removed after brush is worn down

**Popular Applications:**

- Weld scale removal
- Deburring
- Roughing
- Paint removal
- Heavy-duty cleaning of large surfaces

**Triple Row, Banded Cup Brushes**

Designed for use on special equipment for the purpose of burr removal from heat exchanger tube plates.

**Knot Type Cable Twist, Banded:**  
**TRIPLE ROW BANDED (UTXCB Type)**

**Brushing Characteristics:**

- Rugged, fast cutting action
- Long life
- Safety designed cups
- Reduced flare at brush face
- Removable steel band

**Popular Applications:**

- Burr removal from heat exchanger plates

Cat. No.	Item No.	Dia. (in)	Wire Size (in)	Trim Length from Band (in)	Arbor Hole* (in)	Max. Safe Free Speed RPM
UTXCB6	19475	6	.020	7/8	5/8-11	6,000
	19495		.035			

\*Also available in 1-1/16 hex for tube sheet deburring.

**Anderbond Crimped Wire Cup Brushes**

Encapsulated in tough black elastomer that gives resilient support for wire points and insures increased life. This brush provides strong brushing action and reduced wire breakage. It is an excellent tool for tough applications, such as removal of heavy burrs, corrosion and rust removal and for heavy weld scale removal.

**Anderbond Brushes:**  
**LIGHT DUTY (UC-U Type)**

**Brushing Characteristics:**

- Metal wire encapsulated in elastomer
- Strong brushing action
- No inefficient flare out
- Fast cutting with minimum pressure

**Popular Applications:**

- Short trim application
- Relatively flat surfaces
- Avoid application to surfaces over 180°F

Cat. No.	Item No.	Dia. (in)	Wire Size (in)	Trim Length from Band (in)	Arbor Hole* (in)	Max. Safe Free Speed RPM

\*All above brushes may be ordered with other arbor hole sizes: 5/8-11, 1/2-13, M10 x 1.25, M10 x 1.5, M14 x 2.0. No additional charge for arbor hole size changes. (M10 Arbor Hole is NOT recommended for 5" and 6" cup brushes)

## Anderson

### KNOT TYPE WIRE WHEEL BRUSHES

Twisted tuft brushes (knot type) provide very strong, high impact brushing action. These brushes will produce more thorough and uniform results on jobs requiring the removal of scale and surface contamination of metal. The TW series wide face twisted tuft sections are excellent for tire buffing, removal of large quantities of soft material and for severe cleaning and spatter removal in narrow, hard to reach areas.

**Typical Applications:**

- Weld cleaning
- Rust removal
- Steel drum cleaning
- Cement pipe fabrication
- Log de-barking
- Burr removal on bullet-nosed gears
- Steel descaling
- Carbon cathode cleaning
- Cleaning screen-type conveyors
- Removal of rubber flash
- Mold cleaning in tire industry, foundry
- Finishing of aluminum ware, copper heat dispensers, brass & copper
- Scarifying
- Roughing tires for retread operation
- Roughing plastic sheets for adhesive purposes
- Roughing finishing quality brick for appearance
- De-fibering wood pulp
- Cleaning oil tanks
- Cleaning oil & gas pipes
- Hot bar and rod descaling
- Cable cleaning and stripping
- Removing excess flux from welding rod during manufacture

### Standard Twist

Standard twist has the tufts twisted 2/3 of their length. These brushes are satisfactory for the majority of applications where severe cleaning action is required.

**Brush Characteristics:**

- Twisted tuft straight wire construction
- Highest quality oil tempered carbon & stainless steel wire
- High to medium flexibility

**Popular Applications:**

- Weld cleaning
- Weld spatter removal (cable)
- Scale removal
- Cleaning
- Deburring
- Flash removal

\*TW3 and TW4 have 5/8-1/2 Arbor Holes

### Cable Twist

Cable twist has the tufts twisted for their entire length, thus affording maximum impact. These brushes should be used for extremely severe cleaning and removal of heavy encrustations.

**Brush Characteristics:**

- Twisted tufts wire construction
- High to medium flexibility
- Rugged high-impact action
- Highest quality oil tempered carbon and stainless steel wire

**Popular Applications:**

- Weld cleaning
- Weld spatter removal (cable)
- Scale removal
- Roughing for adhesion
- Flash removal
- Stringer bead weld cleaning

**MINI-GRINDER BRUSHES**

Industrial mini-grinder brushes are available in wire wheel and cup types. Both styles come in carbon and stainless wire and are adaptable to both light and heavy duty brushing applications. In addition, there is also a wide variety of arbor hole sizes that will fit a wide range of electric and air power mini-grinders.

**Popular Applications:**

- For brushing confined areas such as corners & T-connections
- Stringer bead brush welding
- Flat surfaces & edge cleaning
- Bevel edge cleaning
- Both light & heavy duty cleaning jobs involving mini-grinders

**HURRICANE Twist. Works more aggressively & increases brush life.**

**KNOTTED WIRE CUPS  
(US & USC Type)**

Well suited for weld cleaning, scale removal and deburring jobs. Hard to reach jobs (angle welds and corners) are made easy.

MGA-3	37994	5/8 - 11	3/8-24	20,000

For 302 Stainless Steel, add S to Catalog Number.

## END BRUSHES

### Application Guide for End Brushes

End brushes are used for getting at hard-to-reach places on thousands of jobs throughout the industry. These brushes are mounted on 1/4" diameter stems for use on portable air and electric tools, and in chucks on drill presses. (Micro brushes are mounted on 1/8" and 3/32" stems). They are available in a variety of styles to satisfy a wide range of requirements.

#### Popular Applications

- Rubber & plastic mold cleaning
- Inside diameter cleaning
- Deburring aircraft engine parts
- Preparing surfaces for paint and welding
- Cleaning castings for machinery
- Polishing dies

### Crimped Wire

#### Brush Characteristics:

- Wide range of sizes & shapes
  - Highest quality oil tempered steel wire
  - Densely filled
  - Long life
  - Safe high speed operation
- Now available in carbon steel, stainless steel and brass wire for a wide range of applications.

- Stem diameter: 1/4"
- Trim Length: 7/8"
- \*Max. Safe Free Speed 20,000 RPM, however, speeds over 8,000 RPM do not appreciably enhance the operation.
- Distinctive black cups identify stainless steel brushes.

*Crimp Wire Continues*

#### Popular Applications

- Weld cleaning
- Mold cleaning
- Deburring
- Polishing tools, dies & molds
- Removing rust & paint
- Spot facing

NSN6S

Dyna-Twist's exclusive twisting system has a superior knot construction that is densely filled, resulting in a longer brush life. These brushes come in a wide variety of shapes and sizes. Applications range from weld cleaning, mold cleaning, deburring, spot facing, rust & paint removal to the polishing of tools dies & molds. All brushes are of the highest quality tempered steel wire.

\*Max. Safe Free Speed 20,000 RPM, however, speeds over 8,000 RPM do not appreciably enhance the operation.

#### HOLLOW END, SWAGED CUP - KNOT TYPE (NH Type)

Cat. No.	Item No.		Dia. (in)	Wire Size (in)	Trim Length (in)	Max. Safe Free Speed RPM

**Tool Accessories**

**Anderson**

**Miniature End Brushes**

Miniature brushing tools are used for fine deburring, edge blending and surface finishing where dimension changes are critical. Used in the electronic and instrument industries and tool and die shops. These brushes are used for blending surface junctures without dimensional distortion.

**END BRUSH (MN Type)**

Cat. No.	Item No.		Dia. (in)	Wire Size (in)	Max. Safe Free Speed RPM
	Carbon	Stainless			
MN3	22740	22730	3/16	.003	1/8
MN4	22760	22770	1/4	.005	1/8
MN5	22780	22790	5/16	.005	1/8

For 302 Stainless Steel, add S to Catalog Number.

**CUP BRUSH (MU Type)**

Cat. No.	Item No.		Dia. (in)	Wire Size (in)	Max. Safe Free Speed RPM
	Carbon	Stainless			
MU8	22870	22890	9/16	.005	1/8

For 302 Stainless Steel, add S to Catalog Number.

**WHEEL BRUSH (MW Type)**

Cat. No.	Item No.		Dia. (in)	Wire Size (in)	Max. Safe Free Speed RPM
	Carbon	Stainless			
MW10	22930	22940	5/8	.005	1/8
MW12	22960	22950	3/4	.005	3/32
MW16	23030	23010	1	.005	3/32
MW20	23070		1-1/4	.005	1/8
MW24	23100	23110	1-1/2	.005	1/8

For 302 Stainless Steel, add S to Catalog Number.

**TUBE BRUSHES**

**Single Spiral**

Wire tube brushes are used for cleaning and finishing internal areas. These brushes are made with heavy stem wire and filled with carbon steel, stainless steel wire, or brass wire. They can be used by hand or with portable tools and drill presses.

**Popular Applications:**

- Internal deburring
- Internal thread cleaning
- Internal rust and dirt removal

**Brush Characteristics:**

- Designed for use in portable tools and drill presses
- Highest quality crimped wire
- Heavy twisted stem wire

Mount brush tightly in power tool with minimum overhang. Engage brush in hole to be brushed before starting rotation. Stop rotation before retracting brush.

**SINGLE SPIRAL (WTS Type)**

Cat. No.	Item No.		Dia. (in)	Wire Size (in)	Length of Brush Part (in)	Overall Length (in)
	Carbon	Stainless				
WTS3	28120	28140	3/16	.003	1-1/2	7

For 302 Stainless Steel, add S to Catalog Number  
Stem Diameter: 1/4", Length: 7/8"  
Maximum Safe Free Speed: Speeds over 8,000 do not appreciably enhance the operation.

## Anderson/Brunner & Lay

### STEM MOUNTED SINGLE SECTION FLARED CUP BRUSH (SSMF Type)

Flared single section brushes are excellent for ID cleaning and are more flexible than non-flared single sections. They are less aggressive and conform to irregular surfaces better.

Cat. No.	Item No.		Dia. (in)	Wire Size (in)	Max. Safe Free Speed RPM
	Carbon	Stainless			
SSMF14	08525	08625	1-1/2	.006	20,000

Note: Two snap ring grooves are furnished to enable the punch to be used on the Scotchman/Dvorak and Uni-Hydro machine. One snap ring is provided. For oversized tooling, call the sales department for price and availability.

**Tool Accessories**

**Primark Tool Group**

**Primark Tool Group**

**SCREWDRIVER BITS**

**Parts and Types of Screwdriver Bits**

**Insert Bits** are compact bits that are economical, change-over quickly, and require less storage space and require a bit holder.

They are 1" OAL (overall length) with 1/4", 3/16", & 5/16" hex shanks.

**Power Bits** fit directly into the power tool for improved concentricity and easier clearance. They are 1-15/16" – 6" or longer OAL (overall length) with 1/4" and 5/16" hex shanks.

**General Information:**

**Nutsetters:** Popular for the pre-engineered building industry. For use with Hex Head Screws. 1/4" Hex Shank.

**Bit Holders:** To be used in conjunction with insert bits. "C" Ring retainer and magnetic. One or two piece construction.

**Extensions/Socket Adapters:** Adapts a handriver or drill into a socket wrench.

**Finding the Right Phillips® Bit**

Locate the size and type of screw you will be driving in the chart below. Then move to the far right column to find the right point size for the Phillips you need.

Wood Screw Size			Machine Screw Size		Sheet Metal Screw Size	Point Size
Flat Oval	Flat Oval Round	Flat Oval Binding	Round Fillister	Truss Brazier Button	Flat, Oval Round, Stove Binding

Tri-Wing®, POZIDRIV®, Torq-Set®, Phillips Square Drive® and Phillips® is a registered trademark of the Phillips Screwdriver Company.

Quadrex® is a registered trademark of Isotech Consultants, Inc.

Torx® is a registered trademark of Camcar Division of Textron.

**Phillips® Insert Bits**

- Special bit design absorbs torque peaks reducing slippage and breakage.
- Reduced diameter tip and ribs reduce cam-out and drywall damage.
- Cold formed for optimum toughness and resistance to wear.
- Most widely used style.
- Many configurations and hardnesses.

**Ribs:** The interlocking ribs of the system provide higher torque. Components in the system are interchangeable with standard Phillips components

### Slotted Insert Bits

- Cold formed for optimum toughness and resistance to wear.
- Common in telephone and other electrical devices.
- Proper sizing is important for efficiency.
- Many configurations and hardnesses.

**Ribbed:** The interlocking teeth of the ribbed system provide higher torque. Components in the system are interchangeable with standard Slotted components.
